[Zurn] Create new Consignment Release Scan Action

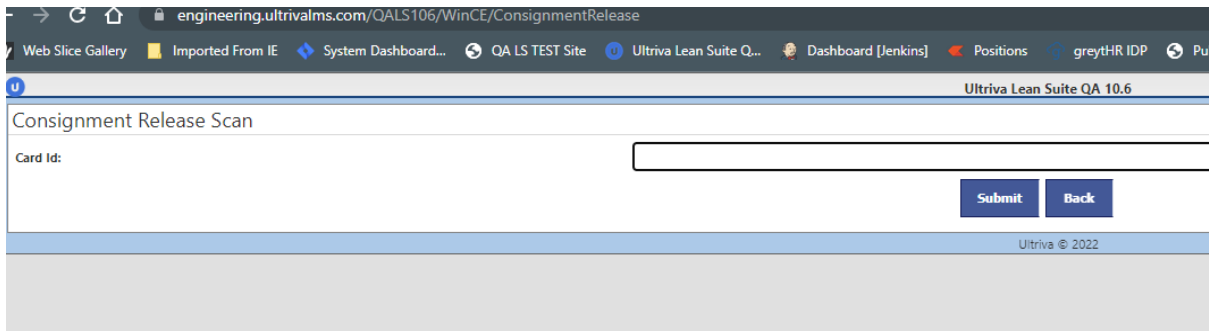

Created a new Buyer Scan Action for Single Card Scan named "Consignment Release ". This action is not allowing Multiple Cards Scan.

Find the Scan Action under the regular Scan Actions menu and in the WinCE.

In Normal Scan menus list:

In WinCEscan:

→The idea of this action is to scan one “On Hand” card that was previously received (It means we already completed one cycle for that card) in case the scanned card is not on hand, or it was not previously received, you should get an error.

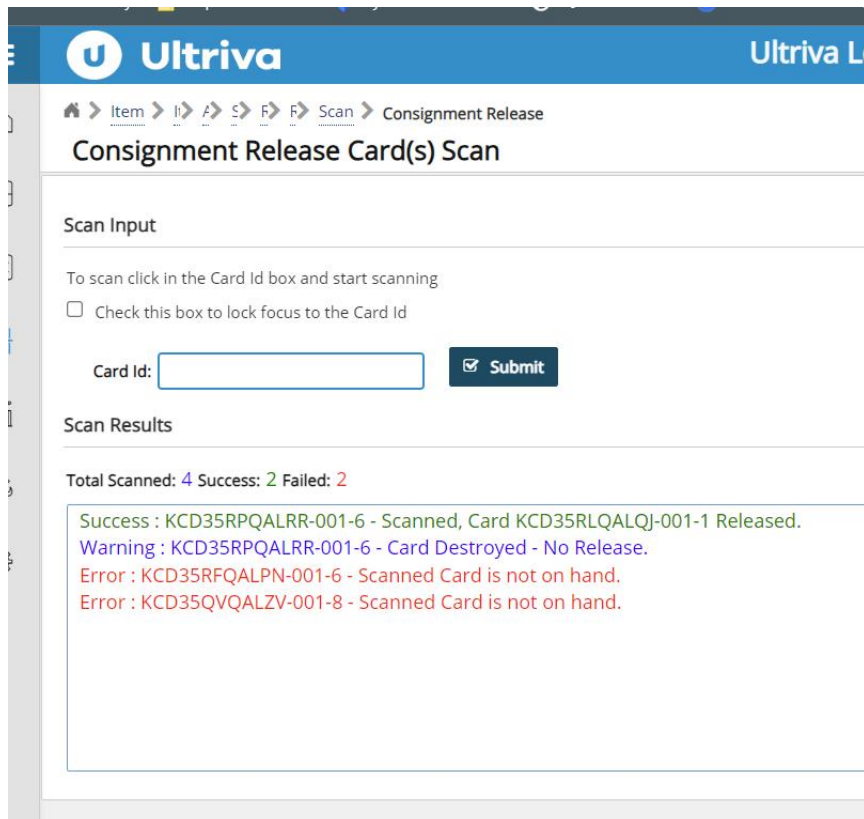

→Then using this card, we will find out the Item associated to the card to make sure it is a Consignment Item. If you scan a card from a Non-Consignment item you should get an error.

→After that we look for the supplier used set to the card in the moment when we receive the card. We will use this supplier in the next steps.

→Then we search for the item associated to the card the oldest received card (Oldest Last Receive Date) that is On Hand. In case there are no On Hand Cards that were received previously, you should get an error.

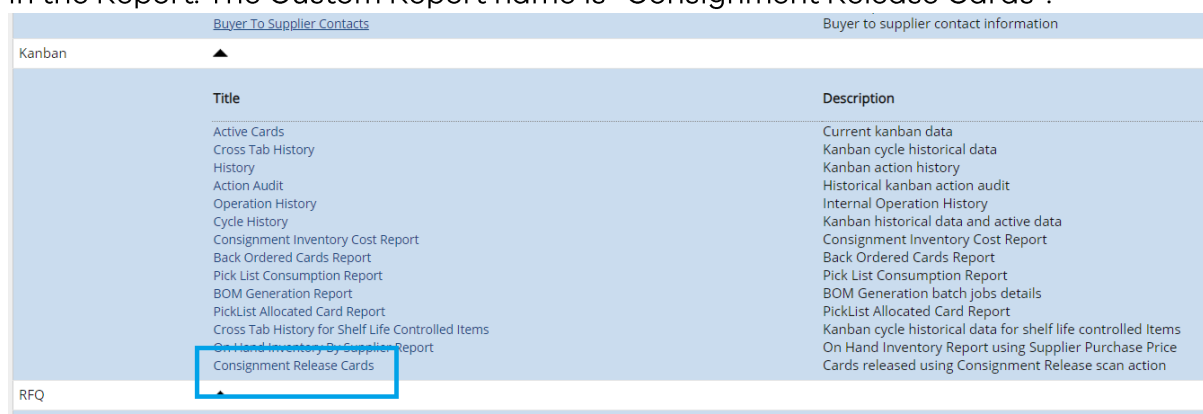

→Once we find the Oldest on hand received card and we have the supplier from previous step, we release that card.

→We are not releasing the card that we scanned, we are releasing the Oldest On Hand Received card. In case the card we scanned is the same oldest on hand received card. The scanned card will be released.

→Then Scan one of the On Hand cards the previously completed a cycle and you should get released the Oldest On Hand Received card.

→Also, created a Custom Report under the Kanban Category to show the cards released using this Scan Action, just the cards released with this action will appear in the Report. The Custom Report name is "Consignment Release Cards".

Create custom report

Kanban: Consignment Release Cards

1. Report Information

*Name:

*Description:

Visible only to me Visible to All

2. Report Output Format

Tabular

3. Add Fields for Report Filter

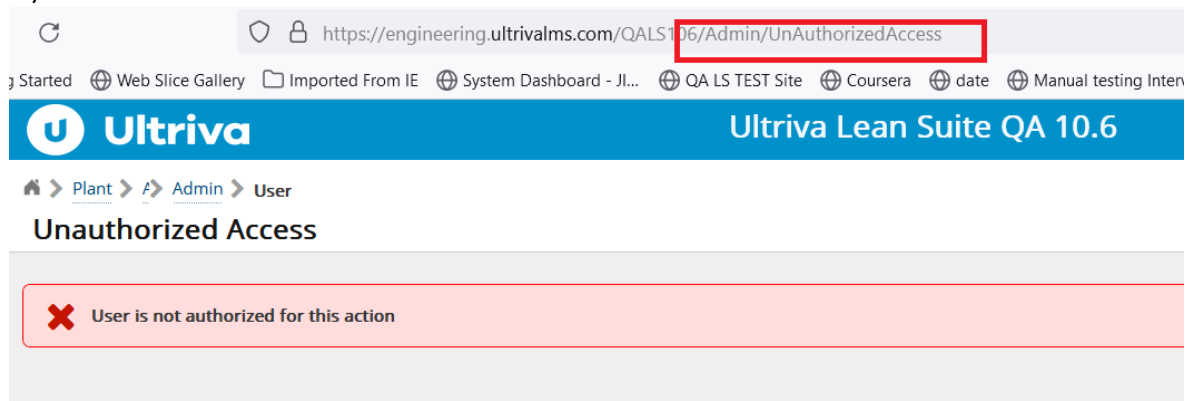

Please select field, select an operator, enter value and click Add to add the filter condition. You may add any number of filter conditions.

Bug fix-Fixed Screen navigation issue Assign business unit to plant user

When the user was assigning a Business Unit to a plant user if the user decides to cancel the process and pressed the Back Button. The application was throwing a System Error.

This was fixed.
