## Ultriva 9.5.1 Release Notes

### 1 Bug fixes

#### 1.1 *Export to excel Master Label details*

---

The bug cause was changing UI element for Card quantity.

#### 1.2 *Job ERP Receipt Serial: under receipt for serial controlled item*

---

On under receipt without last lot flag job should go in state Pending and wait for more receipts to complete quantity for this card.

#### 1.3 *On card search results page links to Update Receipt and Cancel Receipt are not working*

---

The bug cause was an enhancement to make all pop-ups movable.

#### 1.4 *Capacity utilization remaining time calculation for current date*

---

Fixing issue with calculating remaining working hours for the day when shift is going over midnight - starts at 3 pm and ends at 3 am next day. All time calculations are made in user's time zone.

#### 1.5 *Removing item description from Update Serial No result page*

---

Item description might have special characters, so we don't have to send it in JSON to result page.

#### 1.6 *Scan receive submit bug*

---

After enhancements for Serial No input on receive scan, bug on scan without required quantity got introduced.

#### 1.7 *Spike order screen dropdown localization*

---

Kanban category dropdown list didn't support on run time localization.

#### 1.8 *AutoSize export bug*

---

Introducing "N/A" as a valid value for average columns without long enough period of data is the cause for the bug.

#### 1.9 *CardDesign vs Loopsiz wizard cards calculation*

---

Card Design report didn't take in consideration reorder point, so it produced wrong card number for items with settings "reorder on empty box".

## Ultriva 9.5.1 Release Notes

### *1.10 EBJ\_RTPParams value not persisting for flex field after initial save*

---

Discovered feature of not letting user create flex field with ERP name that starts with letter f. For now, this logic disabled.

### *1.11 Purchase order Integration status error*

---

Purchase order integration status report got added field that doesn't belong to this report: item. This happened during enhancement for PO Receipt integration to show link to update serial number.

## 2 Enhancements

### *2.1 PO Grouping eBizEAI data transfer enhancement*

---

To move processed POs data back from eBizEAI implemented process of partial update based on max batch size.

### *2.2 Adding Plant filter to Update Serial No page*

---

To speed up search Serial No use only current plant's items.

### *2.3 Value Stream Overview Enhancements*

---

Created new Value Stream overview

### *2.4 Batch Job Report for Forecast*

---

Added PO#, PO Line #, PO Release #, PO Release Line #, Exception Code to report and to the filter.
